Sample 3

Part A – UNIX

Login as root

sudo -i

1. Clear the screen
   clear
2. Display the full path of the current directory
   pwd
3. Create a directory named DataLab inside /home, and create hidden files: .alpha and .beta and visible files: notes.txt, results.txt inside it
   mkdir /home/DataLab

   touch /home/DataLab/.alpha /home/DataLab/.beta
   touch /home/DataLab/notes.txt /home/DataLab/results.txt

   if the question said in one command:
   mkdir /home/DataLab
   touch /home/DataLab/{.alpha,.beta,notes.txt,results.txt}
4. Save the following into the results.txt:

   Computer hardware such as: RAM, ROM, CPU
   Computer software such as: Operating System, Microsoft Office

   cat >> /home/DataLab/results.txt
   then write the above text here
5. Append the current date to results.txt

   date >> /home/DataLab/results.txt
6. Copy the file results.txt to /tmp, and rename it to final.txt
   cp /home/DataLab/results.txt /tmp/final.txt
7. Display the number of lines and characters in final.txt
   wc -lc /tmp/final.txt
8. Display only the first two lines of final.txt then the last one
   head -n 2 /tmp/final.txt
   tail -n 1 /tmp/final.txt
9. Sort the contents of results.txt and display it
   sort /home/DataLab/results.txt
10. Cut and display only the first 10 characters from each line of final.txt
    cut -c 1-10 /tmp/final.txt
11. Display lines of final.txt containing the word “Operating”
    grep "Operating" /tmp/final.txt
12. Create a new user named Shadi, assign him to a new group named labusers
    groupadd labusers

    useradd -m -g labusers Shadi

Prepared by Mr. Al Jouweide

Part B- Windows 7

1. Create a group named LabGroup
   Start Menu > Computer Management > Local users and Groups
   Right click on groups > New group > Write LabGroup in the group name then create and close

2. Create two users: Robert and Mira
   Right click on users in the Local users and Groups window > New user
   Write Mira for user Mira > Create
   Write Robert for user Robert > Create then close

3. Add both users to the LabGroup
   In the groups
   Right click on LabGroup > Properties
   In the dialog box click on Add button
   Write Mira then check names, write Robert then check names then OK

4. On the Desktop create a folder named Reports
   On desktop
   Right click > New > Folder > Name it as Report

5. Assign the LabGroup Full control permission to the folder
   Right click on the Report folder > Properties
   Click on Security tab > Edit button > Add button
   Write in the box LabGroup then checkName > OK
   Check the full control permission then OK

6. Share the Reports folder over the network
   Right click on Report folder > Properties > Sharing Tab
   Advanced Sharing > Share this folder > OK > Close

7. Install a local printer named canon-Laser 3000
   Start menu > Devices and printer
   Right click > Add a printer > Add a local printer > Next > Choose the Canon type > Next > Finish

8. Share the printer on the network
   Start menu > Devices and printer
   Right click > Add a printer > Add a Network printer
   System will search about connected printers, choose the Canon then next then finish
