1. Which 2 objects can have NTFS permissions applied to them? a) Printers b) Shares c) Files d) Folders	**2. How many Windows local groups can be stored on a Windows domain controller?** a) 0 b) 512 c) 124 d) Unlimited
3. Which of the following conversions are possible? (Select all that apply) a) FAT to NTFS b) FAT32 to NTFS c) NTFS to FAT d) NTFS to FAT32	**4. Which of the following are not casesensitive?** a) User account name b) Password c) Description d) Full name
5. Which utility would you use to create your domain user accounts? a) Domain users and groups b) Active directory users and groups c) Domain users and groups d) Active directory users and computers	**6. User A is a member of the Sales group, which has the NTFS Read permission for the Inventory folder. User A is also a member of the Marketing group, which has the NTFS Modify permission for this folder. The folder is shared with the Read permission for everyone group. When accessing the folder over a network, User A can:** a) Create and delete new files and subfolders. b) Change folder permissions and create new files and subfolders. c) See files and subfolders in the folder. d) Create new files and subfolders but not delete them.

7. Which of the following protocols automatically assigns IP addresses? a) TCP b) DHCP c) WINS d) FTP	**8. Which type of user account can be used only in a network with at least one Windows Server computer?** a) Local user account b) Domain user account c) Local guest account d) Local administrator

9. Which of the following is not a share permission? a) Read b) Full Control c) Change d) Write	**10. Which of the following classes allows the greatest number of network addresses?** a) Class A b) Class B c) Class C
11. You need to set the password for a user account. Using Active Directory Users and Computers, you can: a) Select the account, and click Reset Password on the Action menu. b) Enter a new password on the Accounts tab in the Properties dialog box. c) Right-click the account, and then click Rename on the shortcut menu. d) Enter a new password on the General tab in the Properties dialog box.	**12. Which utility would you use to create your domain groups?** a) Domain users and groups b) Active directory users and groups c) Domain users and computers d) Active directory users and computers
13. Which one of the following options is not a valid group scope for windows domain controllers? a) Domain local b) Global c) Security d) Universal	**14. One of your system administrators is taking a three-month leave of absence. For security reasons, you should:** a) Delete the user's account. b) Rename the user's account. c) Disable the user's account. d) Move the account to a storage location.

15. Given a host with the IP address 172.32.65.13 and a default subnet mask, to which network does the host belong? a) 172.32.65.13 b) 172.32.65.0 c) 172.32.0.0 d) 172.0.0.0	**16. Which of the following rights is not associated with the NTFS Modify permission?** a) Rename folders b) Open folders c) Take ownership of files and folders d) Delete files
17. What criteria do identify a class B address? a) The first byte between 1 and 127 b) The first byte between 127 and 191 c) The first byte between 128 and 192 d) The first byte between 128 and 191	**18. You need the best possible security on your hard disk. To achieve this goal, you should:** a) Use NTFS system. b) Enable file encryption on a FAT32 volume. c) Use NTFS now, but convert to FAT32 later. d) Use FAT32 and enable folder-level security.

19. In Windows printing, which of the following refers to a hardware printer? a) Printer b) Print device c) Print spooler d) Printer driver	**20. Which of the following protocols translates IP addresses to MAC addresses?** a) IP b) ARP c) RARP d) ICMP
21. What is the primary purpose of active Directory Users and computers (ADUC)? a) Managing network connections b) Managing user accounts and groups c) Configuring firewall settings d) Installing software updates	**22. Which tool would you use to create a new user account in Active Directory?** a) Event Viewer b) Device Manager c) Group Policy Management Console d) Active Directory Users and Computers
23. Which component of Active Directory stores information about users, groups, and other objects? a) NTFS b) LDAP c) DNS d) NTDS.dit	**24. To create a domain user account, you need to specify:** a) Only the user's first name User logon name (username) and initial password b) Only the user's last name c)

	d) User's phone number
25. In Active Directory, what is the purpose of an Organizational Unit (OU)? a) It is used for organizing physical network devices b) It is used for organizing users, groups, and computers c) It is a type of security group d) It is used for configuring DNS settings	**26. Which of the following is not a role of Active Directory?** a) Centralized authentication and Authorization b) Organizing files on disk c) Managing user and group policies d) Providing a directory service
27. What is the primary authentication protocol used in windows environments for domain authentication? a) HTTP b) LDAP c) Kerberos d) SSH	**28. Which tool would you use to manage Group Policy settings in a Windows Server environment?** a) Active Directory Users and Computers. b) Group Policy Management Console c) Disk Management d) Computer Management
29. Which command-line utility can be used to perform administrative tasks related to Active Directory? a) ipconfig b) regedit c) netsh d) dsquery	**30. which utility is commonly used to manage user accounts in an Active Directory Domain?** a) Task Manager b) Control Panel c) Active Directory Users and Computers d) Disk Management

31. User B is a member of the HR group, which has the NTFS Write permission for the Documents folder. User B is also a member of the Finance group, which has the NTFS Read permission for this folder. The folder is shared with the Modify permission for the Everyone group. When accessing the folder over a network, User B can: a) View and modify the contents of the folders b) Only view the contents of the folder c) Delete files from the folder but cannot modify them d) Add new files to the folder but cannot modify existing ones.	**32. Which of the following protocols is used for securely transmitting data over the internet?** a) FTP (File Transfer Protocol) HTTPS (Hypertext transfer Protocol Secure) b) SMTP (Simple Mail Transfer Protocol) c) d) SNMP (Simple Network Management Protocol)
33. Which protocol is used for resolving domain names to IP addresses? a) TCP (transmission control protocol) b) FTP (file transfer protocol) c) DNS (domain name system) d) DHCP (dynamic host configuration protocol)	**34. Which protocol is responsible for sending and receiving emails between servers?** a) SMTP (simple mail transfer protocol) b) SNMP (simple network management protocol) c) HTTP (hypertext transfer protocol) d) POP3 (post office protocol version 3)
35. Which type of user account allows access only to a single computer and its resources? a) Local user Account b) Domain User Account c) Administrator Account d) Guest Account	**36. Which type of permission defines what actions a user can perform on a file or folder in a windows environment?** a) Share Permission b) NTFS Permission c) Group Policy Permission d) Registry Permission
37. In a network environment, what is the purpose of a workgroup? a) To To share resources such as files and printers manage user accounts centrally b)	**38. Which protocol is commonly used for securely accessing remote computers over a network?** a) FTP (file transfer protocol) b) SSH (Secure Shell) c) SNMP (Simple Network Management Protocol) d) SMTP (Simple Mail Transfer Protocol)

c) To establish secure connections between computers d) To provide internet access to network users	
39. Which type of user account is temporarily created to provide access to guests or visitors on a computer or network? a) Local User Account b) Domain User Account	**40. What is the primary function of a DHCP server in a network environment?** a) To assign IP addresses to network devices dynamically
c) Administrator Account d) Guest Account	b) To manage user authentication and permissions c) To secure network communications using encryption d) To provide DNS resolution for domain names
41. Which networking device is used to connect multiple computers within a local area network (LAN) and forward data packets between them based on their MAC addresses? a) Router b) Switch c) Hub d) Modem	**42. Which windows feature allows users to access files stored on a remote computer as if they were stored locally?** a) Remote Desktop b) Remote Assistance c) File Sharing d) Virtual Private Network (VPN)
43. In a windows environment, what is the purpose of the "read & execute" permission for a file or folder? a) Allows viewing and opening files, but not executing programs b) Allows modifying the contents of files or folders c) Allows deleting files or folders d) Allows running executable files and scripts	**44. In a windows environment, what is the primary function of the "Deny" permission?** a) Prevent users from accessing files and folders Allows users to access files and folders b) c) Allows users to modify files and folders d) Allows users to delete files and folders

45. What is the purpose of DNS in a network? a) To assign IP addresses to network devices dynamically b) To provide encryption for network communications c) To resolve domain names to IP addresses d) To manage user authentication and permissions	**46. Which network service is responsible for translating human-readable domain names into IP addresses?** a) DHCP (dynamic host configuration protocol) b) FTP (file transfer protocol) c) DNS (domain names system) d) http (hypertext transfer protocol)
47. which utility is commonly used to manage domain groups in Active Directory? a) Active Directory Domains and Trusts b) Group Policy Management Console c) Active Directory Users and Computers d) Active Directory Administrative Center	**48. Which of the following is not a built-in group in Windows Active Directory?** a) Domain Admins b) Enterprise Admins c) Power Users d) Backup Operators
49. Which of the following is not a valid Active Directory object type? a) User b) Group	**50. Which of the following is not a valid group type in Active Directory?** a) Security Group b) Distribution Group

c) Printer d) ızational Unit	c) Local Group d) Universal Group
51. Which of the following is the best practice for securing user accounts in Active Directory? a) Enabling guest account b) Sharing user passwords among team members c) Implementing strong password policies d) Allowing users to choose their own passwords	**52. What is the recommended action if a user reports a suspicious email asking for their password?** a) Ignore the email Forward the email to IT security for investigation b) Reply to the email with the password c) d) immediately provide the password to the sender

53. which of the following is NOT a recommended practice for securing network devices? a) Regularly updating firmware and software b) Using default passwords for convenience c) Implementing access control lists (ACLs) d) Disabling unused ports	**54. Which of the following file systems is commonly used in windows operating systems?** a) FAT32 b) HFS+ c) Ext4 d) NTFS
55. In NTFS permissions, which permission allows a user to view file and folder attributes? a) Read b) Write c) Modify d) Execute	**56. Which of the following permissions is not available in the standard NTFS permission set?** a) Full Control b) Modify c) Append Data d) Execute
57. What is the maximum file size supported by the FAT32 file system? a) 2 GB b) 4 GB c) 16 GB d) 32 GB	**58. Which of the following is not a benefit of using NTFS over FAT32?** a) Support for larger file sizes Compatibility with older versions of windows b) Better security features c) d) File compression and encryption capabilities
59. Which permission allows a user to create new files and folders within a directory in NTFS? a) Read b) Write c) Modify d) Create	**60. In NTFS permission, which permission allows a user to modify the contents of a file?** a) Read b) Write c) Modify d) Full control

61. Which of the following is a characteristic of the exFAT file system? a) Support for file size limit of 4 GB b) Maximum file size limit of 4 GB c) Native support on macOS d) Designed for use on flash drives and external storage	**62. Which permission allows a user to modify file contents but not change permissions?** a) Read b) Write c) Modify d) Full control
63. Which security feature is NOT supported by the FAT32 file system? a) File encryption b) File compression c) File and folder permissions d) Disk quotas	**64. In NTFS permissions, what does the "Full Control" permission include?** a) Read, Write, Execute b) Read, Write, Modify c) Read, Write, Delete d) Read, write, Modify, Delete, Change permissions
65. Which file system is the most suitable for large capacity hard drives and offer support for files over 4 GB in size? a) FAT32 b) exFAT c) NTFS d) ext4	**66. which permission allows a user to read and execute files, but not modify them, in NTFS?** a) Read b) Write c) Execute d) Modify
67. Which component manages the printing process by queueing print jobs and sending them to the printer? a) Printer b) Print device c) Print spooler d) Printer driver	**68. What is the purpose of a printer driver inn Windows?** a) It manages the printing queue b) It communicates with the printer hardware c) It stores print job data temporarily d) It converts print job data into a format the printer can understand
69. Which type of printer uses a laser to produce an image on a drum, which is then transferred to paper? a) Inkjet printer b) Dot matrix printer c) Laser printer d) Thermal printer	**70. Which printer technology sprays tiny droplets of ink onto paper to create images and text?** a) Dot matrix printing b) Inkjet printing c) Laser printing d) Thermal printing

71. Which windows utility allows users to manage printers, print jobs, and printer settings? a) Device Manager b) Control Panel c) Print Manager d) Task Manager	**72. Which printing feature in windows allows users to send a print job to a printer and have it stored on the printer until it is manually released?** a) Print spooling b) Print pooling c) Print queuing
	d) Print job hold/release
73. Which term refers to a printer's ability to print on both sides of a sheet of paper automatically? a) Duplex printing b) Dual-side printing c) Bidirectional printing d) Double-sided printing	**74. Which type of printer uses pins to strike an ink-soaked ribbon against paper, creating text and images through a series of dots?** a) Inkjet printer b) Laser printer c) Dot matrix printer d) Thermal printer
75. Given a host with the IP address 192.168.1.35 and a default subnet mask, to which network does the host belong? a) 192.168.1.35 b) 192.168.0.0 c) 192.0.0.0 d) 192.168.1.0	**76. A network administrator needs to create 8 subnets from the network address 172.16.0.0 using the subnet mask 255.255.255.224. what is the increment value for the subnets?** a) 8 b) 16 c) 32 d) 64
77. Which protocol is used for securely transmitting data over a network? a) HTTP b) FTP c) HTTPS d) SNMP	**78. What is the subnet mask for Class C IP address?** a) 255.0.0.0 b) 255.255.0.0 c) 255.255.255.0 d) 255.255.255.255

79. You are moving several of Bob's files from a directory to another directory on the same partition. What message should you receive when you encounter an encrypted file? a) You should not receive a message; the file will just be moved. b) You should get an Access Denied message. c) You should get a message stating that you could not read the file and that it may be corrupted. d) You should get a message stating that the file cannot be moved because it is encrypted.	**80. What is an operating system?** a) interface between the hardware and application programs b) collection of programs that manages hardware resources c) system service provider to the application programs d) all of the mentioned
